

BACKEND ENGINEER (M/F/D)

MUNICH

Being part of our software engineering cluster, you join R&D projects as a Backend Engineer. For instance, building the backend of a platform aimed at bringing startups and investors together for tech challenges or building chatbots are just some examples of plenty innovative projects at Motius.

YOUR ROLE

- You develop new backend features and ideas for the conception and implementation of our tech projects
- You are part of one of our interdisciplinary & multinational development teams
- You work in a team of 2-4 developers with support from our DevOps team
- Together with your team you are a key-role of the complete software development process (kick-off, bi-weekly sprints, retrospective)
- You have a direct impact on the products and innovations of our customers

YOUR PROFILE

- Experience in agile software engineering projects
- Experience with Python and/or Django, Flask, node.js, etc.
- You know when to use relational DBs and when to use NoSQL DBs
- Having worked with Docker, GitLab CI or comparable tools is an advantage
- You are curious and motivated to develop yourself both technically and personally

OUR OFFER

- Insights and impact into markets & products of the future on a growing company
- Steady learning curve through internal workshops (like OpenShift, Blockchain, NLP, VueJS or functional programming)
- Open and communicative culture – on a professional and personal level
- We trust your skills, you'll get a lot of responsibilities and as TUM student you can combine one of our projects with your IDP
- Regular community events, teambuilding, flexible working hours, competitive salary and numerous benefits

Our vision is to become the best place for techies. We are convinced that talented engineers and techies will develop breakthrough products, if given the chance. Following our vision, we're enabling the best techies to apply the newest technologies and create the most innovative tech products – day in, day out.

Motius is a R&D company that is specialized in the technologies of the future. With its mix of an unique tech community of more than 800 talented techies and engineers in the fields of computer science, electrical engineering, and mechanical engineering with an experienced management team, Motius always stays expert in the newest technologies. With this expertise, Motius develops innovative products and solves technical problems with world-class companies.
